

288-core ribbon optical cable splicing

Overview

288 Cores Fiber Optical Splice Closure GJS-D010, also known as fiber optic splicing closures, is a device used to provide space and protection for fiber optic cables spliced together. The fiber optic closure connects and stores optical fibers safely either in the outside plant or. The fibres shall be ribbonized for easy mass fusion splicing and termination with 12-fibre MPO style connectors. FusionLink™ RICT with FlexRibbon® technology presents an ultra-compact indoor cable design that incorporates 288 bend-insensitive fibers.
