

360 Router Setup with 100Mbps Fiber Optic Cable

Overview

To set up your router for fiber internet quickly, connect the router to your fiber modem, access the router's settings via a web browser, and input the provided ISP credentials. Some customers may report the speed is limited to 100 Mbps when connected to the TP-Link router, while the speed is much faster and can reach up to 500+ or 900+ Mbps when connecting to the ISP modem directly. Fiber-Ready Router: Ensure your router supports gigabit speeds or higher to fully leverage fiber's capabilities. High-Quality Ethernet Cable: A Cat6a or higher cable is essential for maintaining. Fiber optics can transmit data over much longer distances compared to traditional copper cables. This makes them ideal for connecting remote areas and facilitating high-speed internet in rural regions.
