

4-core optical splitter solution

Overview

The result is a fully 3D-printed optical splitter that integrates multiple optical functions into a single microstructure. This high level of integration reduces system size and complexity while enabling custom coupling geometries, selective core addressing, and direct on-fiber. With Huawei's core concept for ODN construction centering on full and dense coverage coupled with short and easy access, Huawei's ODN 3. By dividing a single optical signal from a central Optical Line Terminal (OLT) into multiple outputs for Optical Network Terminals (ONTs) at users' homes, splitters eliminate the need for dedicated fibers to each residence—slashing infrastructure costs while scaling network reach. Fiber Distribution Box 4 Cores IP-55 SC Connector PLC Splitter (FDB), known as optical Distribution box (ODB) as well, is a compact fiber management product of small size. WEINERT Fiber Optics utilizes a photolithographic chip technology to develop and produce planar lightwave circuits (PLC).
