

Are fire protection cables stored in cable trays

Overview

Here is what they do: They Make Safe Paths for Fire System Wires Cable trays are made from materials that resist fire. Safety of a cable tray is not a matter of compliance with codes, but a matter of saving human life and billions of dollars' worth of infrastructure. Poorly fitted trays may serve as a fuse in case of a short or a top chimney in case of a fire. Effective protection of cable systems around the world: our tried-and-tested FLAMMOTECT-A and DG-CR 0. They concentrate power and communication cables in overhead or underfloor routes, allowing organized and accessible cable management. But this same concentration of wiring also creates a fire risk that can be difficult to detect and control.
