

# **C220 Optical Line Terminal**

## Overview

---

C220 is big/middle OLT equipment with high density, high bandwidth and scalable office end equipment of passive optical access. ZTE ZXA10 C220 EPON OLT equipment, Optical Line Terminal, generator room netcore, middle size, better than C200 Multiple interfaces C220 configuration: Two control boards, the model is GCSA, with cable control port, SD memory card ports, etc. The FTTH solution bases on xPON technology complies with the access network topology features with small-size passive ODN, and excellent adaptability, without electromagnetic and lightning interference to reduce the equipment fault ratio. Modern telecommunications depend on olt c220 as basic building blocks for fast data transfer over great distances. These devices and systems use light to transport data and provide better dependability and bandwidth than conventional copper connections. Technical specifications and parameters | Device Capacity - The device is 6U in height and adopts the vertical plug-in board method, with a total of 10 PON board slots. The following is the EPON board, the model number is EPFC: The following is the control card, the model number is GCSA, there are 4 RJ-45 ports: This is the uplink board, the model is EIGM, there are two uplink modules, and also 4 RJ-45 ports: The following is the bottom of the OLT equipment: The.

## C220 Optical Line Terminal
