

Can Om5 fiber optic cables transmit 10 Gigabit Ethernet

Overview

OM3, OM4, and OM5 are types of multi-mode optical fibres commonly used in data centres and enterprise environments to support various network speeds and transmission distances, including 10 gigabit Ethernet (10G), 40 gigabit Ethernet (40G), 100 gigabit Ethernet (100G) and 400. Twisted pair cable is the popular standard for 1Gbps Ethernet networks, using RJ45 connectors. However, for native 10GbE over copper (10GBASE-T), faster Category 6 or above cabling is necessary. Why?

Higher frequency signals face more impedance and electromagnetic interference over distance. It still uses LEDs as its light source, but its core, when compared to OM1, is smaller. OM3 is a laser-optimized multimode fiber (LOMMF) with a 50µm core and aqua blue jacket.
