

Category 6 panels or fiber optic cables

Overview

Cat6 remains a reliable and practical choice for most device connections, while fiber optic cabling is better suited for longer distances and larger infrastructure systems. A properly designed network often uses both together instead of treating them as competing technologies. Both transmission media have their particularities, benefits and limitations that make them more suitable for different types of applications. The increased plastic core isolates the crosstalk between the internal pairs, and the thicker. As the 6th gen Ethernet cables are made from twisted sets of copper wiring, cat6 cables are made out of four sets of wires, similar to cat5 cables.
