How optical communication cables work and how they differ from

The Basics What Are Optical fibres? Optical Cable Design Interconnections, Jointing and Termination Installation Tips The basic aim of a transmission cable is to protect the transmission medium from its environment and the rigours of installation. Conventional cables with metallic conductors are designed to function effectively in a wide range of environments. However, optical fibres differ significantly from copper wires to an extent that has a considerable bearing. See more on [electrical-engineering-portal Wikipedia](#)
