

Configure the management IP for the core switch

Overview

To remotely manage the device, an IP address must be defined to access the switch. This is a fundamental process for accessing the switch's web configuration interface and making the necessary configurations for proper network operation. A Cisco switch gets its management IP on an SVI (usually VLAN 1 or a dedicated mgmt VLAN).

Configure the management IP for the core switch

ECS5520 Series CLI Reference Guide

The switch can be configured to accept management commands from Simple Network Management Protocol (SNMP) applications such as Edge-Core ECVIEW Pro. You can configure the

Service , Kubernetes

The cloud-controller-manager component then configures the external load balancer to forward traffic to that assigned node port. You can configure a load balanced Service to omit
