

Connect to the explosion-proof connector of the distribution box

Overview

Use rubber plates to connect the tray to the explosion-proof distribution box, protecting wires and cables. The factory should complete the secondary circuit wiring and relevant tests before shipping. Proper installation, wiring, and usage are critical to ensuring the safety and functionality of these systems. The wire inlet and outlet of explosion-proof distribution box should be set at the bottom of the box, not at the top, side, back or door of the box; The incoming line and outgoing line shall be sheathed and bundled, and waterproof bending shall be made; The conductor bundle shall not be in direct.
