

Connecting an H3C Access Switch to a Wireless AP

Overview

· Manual—If this mode is selected, you need to type an AP serial ID. The following information provides an example for configuring APs to associate with the AC at Layer 3. In our Enterprise solution section in last post we had covered the Huawei WLAN Controller setup, today we will focus on how to configure H3C WLAN controller & complete wireless project end to end to configure Switch, AP, AC & Firewall with internet mentioned in diagram. A wireless client can access a WLAN only when it completes the scanning, link layer authentication, association, and WLAN authentication processes. The WA2612-AGN ships as a FIT AP (managed) and operate with wireless local area network (WLAN) switches or access controllers to provide wireless access for WLAN users.

Connecting an H3C Access Switch to a Wireless AP

Microsoft Word

The H3C WA2612-AGN is an 802.11n access point (AP) product developed by H3C. The WA2612-AGN ships as a FIT AP (managed) and operate with wireless local area network (WLAN) switches or

H3C WA Series Access Points Web-Based Configuration Guide-6W106

The H3C WA Series Access Points Web-based Configuration Guide describes the web functions of the WA series, such as quick start, Web overview, wireless service configuration, security and

Support

To access a wireless network via an AP, a client must associate with that AP. After the client passes authentication on the AP, the client sends an association request to the AP.

Support

To log in to the AP through a wireless connection: 1. Enable WLAN on the configuration terminal and access `WLAN H3C_xxxxxx`, where `xxxxxx` is the last six bits of the AP's MAC address. 2. Enter telnet

Support

3 Accessing the AP Logging in to the AP from the console port Connecting the AP to a configuration terminal from the console port Setting parameters for the configuration
