

Connection method of high voltage line in distribution box

Overview

Busbar connection is the most common electrical connection method in distribution boxes. The entire work has been done following a proper engineering plan to ensure safety, durability, and professional quality. The instructions are applied to new demand and production connections made to Elenia's high-voltage distribution network, together with the connection contract and the terms and conditions of Finnish Energy. The choice between LT, HT, and transmission lines depends on multiple factors including.
