

Denmark OSFP optical module QSFP28

Overview

OSFP is a new pluggable form factor module providing eight lane electrical interface that will support 400Gbps (8X50G), 800Gbps (8X100G) and future 1.6T. It is a little wider and deeper than the QSFP and QSFP-DD but still supports 36 ports on 1U front panel. Understanding the differences between QSFP+, QSFP28, QSFP56, QSFP112, QSFP-DD, and OSFP is essential for network architects, data center managers, and procurement specialists planning current deployments and future-proof infrastructure. An engineer-focused, "just tell me what to choose" guide to transceiver selection with architecture, power budget, compatibility, and upgrade plan — designed for 25G/100G today and 400G/800G tomorrow. 25G is the new 10G; 100G (QSFP28) is the workhorse; design for migration plans to 400G/800G. The FS® 100GBASE Quad Small Form-Factor Pluggable (QSFP28) portfolio offers customers a wide variety of high-density and low-power 100 Gigabit Ethernet connectivity options for data center, high-performance computing networks, enterprise core and distribution layers, and service provider. QSFP-DD stands for "Quad Small Form Factor Pluggable Double Density" and strictly complies with IEEE 802.3.
