

Distance between machinery and distribution box

50km/spool

Overview

Typical Spacing Distances (General Guidelines): Vessels and Towers: At least 5 to 10 meters apart, depending on size and operational hazards. This insightful article will explore the crucial interplay between where machinery is positioned within a facility and how much space is maintained around it to safeguard workers. This article covers general requirements for on-shore plant layout of process units, equipment, and general facilities, utility plant, and. Protect your employees by implementing safety distances and preventing hazard zones from being reached by both upper and lower limbs.
