

Distribution Box Combination

Overview

An Industrial Combination Box is an integrated power distribution unit that combines multiple electrical components—such as CEE sockets, switches, circuit breakers, and indicator lights—into a single, robust enclosure. These boxes, which can contain a range of socket outlets and circuit protection modules, are used in industrial and commercial environments to organize electrical installations and ensure safety. Our flexible distribution boxes enable reliable, decentralised signal transmission and power transmission up to protection class IP67 - wherever passive distribution boxes are required. Each fuse is designed to blow when the current exceeds a certain limit, thereby cutting off the power to prevent damage.
