

Dks101gsc Fiber Optic Switch

Overview

This fiber optical switch is a powerful tool to switch an optical signal at nanosecond speed (200ns). These offer excellent parameters, superior flexibility, and long-lasting stability for a wide variety of applications. Where switches simply block or pass optical signals on individual or multiple channels, multiplexers route multiple channels out to a single fiber optic cable. Luminos CORALIGN™ fiber optic switches incorporate a patented moving fiber design to achieve direct fiber to fiber coupling through either an air or oil filled gap, achieving the lowest Insertion losses in the industry.
