

# **Does the fiber optic cable need to be connected to a front panel Why**

## Overview

---

In a typical setup, the connection consists of a shorter cable plugged into the front side of the patch panel and a longer cable plugged into the back. In this way, the panel can take the place of otherwise expensive switching equipment. A fiber cable (drop) is run from a nearby terminal (that could be either a pole or an underground box) to your home. A small box on the outside of your home called a NID is installed and the fiber is coiled in there and connected to a fiber that runs into the home. This step-by-step guide will give you a clearer understanding of how the installation process works. Fiber optic patch panels are enclosures that act as a distribution hub for fiber cable. A fiber media converter, also known as a fiber to Ethernet converter, allows you to convert typical copper Ethernet cable (e.
