

Does the incoming line to the distribution box need to be grounded

Overview

26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. Safety of Personnel: By safely channeling fault currents into the ground, proper grounding helps to reduce the risk of electric shock to personnel. This helps to reduce the potential difference that exists between conductive parts and the earth. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1.
