

# **Electric wire distribution box red line**

## Overview

---

The REDline Power Boxes are a platform for power distribution solutions in standard housings. They make it easy to identify immediately which wires are live, neutral, or grounded (avoiding costly mistakes and hazardous accidents). The IEC 60446 standard, "Basic and Safety Principles for Man-Machine Interface, Marking, and Identification," establishes global guidelines for identifying electrical equipment terminals, conductors, and wiring colors. The National Electrical Code® (NEC) was the first to reference it, and today continues to set the standards for the electrical industry. Electrical engineers, contractors, traders, manufacturers, and especially electricians worldwide rely on different wiring color codes for wire and cable installations in industrial buildings and residential homes.
