Overview

Optical fiber laying requirements: the bending radius of the optical fiber should be at least 15 times the outer diameter of the optical fiber, and should be at least 20 times during the construction process; when laying the optical fiber, the rotation of the optical fiber. It includes first determining the type of communication system (s) which will be carried over the network, the geographic layout (premises, campus, outside. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet.
