

# **Enable optical modules on the switch**

## Overview

---

In global configuration mode, execute the following commands in sequence to disable the switch's optical module validation and allow third-party modules: `service unsupported-transceiver no errdisable detect cause gbic-invalid` Note: These are hidden commands and cannot be. By default, Cisco switches perform authenticity validation on inserted optical modules. When the optical module on an interface is faulty, you can run the display commands to view information about the optical module.

# Silicon Photonics Networking for Agentic AI , NVIDIA

---

NVIDIA co-packaged optics with silicon photonics deliver 5x power efficiency and 10x resiliency, enabling scalable, high-performance networking for agentic AI.

## Use of Third-Party Optical Modules

---

Like other feature-pack licenses, once you apply the license to a specific switch, the feature is enabled for the life of the switch. Without such a license, switches with 40G and 100G hardware ports that are

Broadcom's scale-up optical interconnects, VCSEL NPO and SiPh CPO, deliver low power, high bandwidth density, and proven reliability, enabling scalable AI

## Checking the Optical Module Type

---

The optical module cannot be installed in an optical interface because the optical

module structure is non-standard. The structure and size of some non-certified optical modules do not comply with the
