Overview

A fiber-optic cable, also known as an optical-fiber cable, is an assembly similar to an but containing one or more that are used to carry light. Image Credit: Nexans Patch cord - Patch cords are short lengths of fiber optic cable with connectors that can be directly attached to other equipment for connecting and managing convenience. The optical fiber elements are typically individually coated with plastic layers and contained in a protective tube. Fiber-optic cabling is widely used for high-speed Ethernet links over relatively long distances. It uses glass or plastic fiber as a medium through which light is "guided" to the other end of the link.
