

Extending the length of communication optical cables

Overview

Yes, fibre optic cables can be extended by using splice closures or optical connectors to join multiple cables together. In the design of any network—whether a home Wi-Fi setup, an office backbone, or a global telecom infrastructure—the maximum length of network cables is a make-or-break factor. It is therefore essential to choose the right optical fibre cables to ensure the network has the longest possible lifespan as well as to ensure its ability to constantly meet high-speed requirements. While fiber optics are known for their ability to transmit data over long distances with minimal signal degradation, the type of fiber, the converter's specifications, and environmental factors can all contribute to distance limitations.
