

FTTR Third Spectrum Splitter

Overview

Active Optical Splitter (PoF Router) for FTTR combines optical communication and DC power delivery in one unit. As 200 Mbps or higher bandwidth becomes the mainstream and requirements for services such as online education, video, VR, e-Sports, and smart office increase sharply, users need Wi-Fi that supports high bandwidth, low latency, wide coverage, and multi-user concurrent access, driving operators to. □ Wall surface installation Suitable for multiple scenarios, higher installation efficiency. The FTTR (Fiber to the Room) GPON PLC Splitter is an integral component of Huawei's FTTR solutions. This splitter exemplifies the convenience of a plug-and-play device that requires no field splicing, offering immediate functionality upon installation. HYC is capable of supplying asymmetric plc splitters with practically uneven splitting ratio, and the output optical signal divided in ratios of 60/40, 70/30, 95/5. Demands for high bandwidth, high bit rates in both directions, low latency, and service reliability are constantly growing. Applications such as online learning, remote work, online gaming, video conferencing, live.
