

Fiber optic cable was utilized

Overview

In 1975, fiber optic cables were used to link computers together in the NORAD headquarters, located in Colorado. A fiber-optic cable, also known as an optical-fiber cable, is an assembly similar to an electrical cable but containing one or more optical fibers that are used to carry. Fiber cables form the core of global networks, connecting continents and data centers with near-zero latency and huge bandwidth capacity. Step Index Fibres: This fiber has a single uniform index of refraction and is made up of a core encircled by cladding. Their ability to transmit massive amounts of data at high speeds makes them indispensable for businesses that rely on fast and reliable connectivity.
