Overview

The components include shell, support frame, fiber tray, fixing device, ODF unit box, etc. Optical distribution frames (ODFs) are an all-important network element at the heart of a fiber network. Representing less than 5% of a typical IT project investment, high density, performance, and quality are pivotal attributes for an ODF ensuring business continuity 24 hours a day, seven days a week. From a frame and rack standpoint, we offer GR-449 compliant rear cable access frames and zone 4 compliant front cable access frames. As data centers, enterprises, telecom operators, and smart-building infrastructures deploy increasingly dense fiber links, ODFs provide the structured, organized, and secure environment for connecting a trunk cable to a distribution cable) via fusion or mechanical splicing, with splices protected in.
