

# **Frequent conversations cause AI server crashes**

## Overview

---

Long AI conversations increase the risk of drift, hallucinations, context loss, and incorrect assumptions. What used to happen only after hours with GPT-4 now occurs quickly, forcing constant browser refreshes just to receive new messages or code. When a human-AI conversation involves many rounds of continuous dialogue, the powerful large language machine-learning models that drive chatbots like ChatGPT sometimes start to collapse, causing the bots' performance to rapidly deteriorate. ai web interface experiences significant stability issues that degrade the user experience, particularly for heavy users on paid plans. From broken memory and repetitive loops to censorship and unstable servers, frustrated users are rage quitting in droves. So why are many of them moving to Storychat?

Let's break down the Top 5 Rage Quit Moments from C.

## Frequent conversations cause AI server crashes

---

### Chatgpt web page crashing after every prompt :

---

Chatgpt web page crashing after every prompt \*UPDATE\*: After some days, OpenAI seems to have completely fixed the issue. Prompts on my long-running

### A new way to let AI chatbots converse all day without
