

Full name of busbar distribution box

Overview

In electric power distribution, a busbar (also bus bar) is a metallic strip or bar, typically housed inside switchgear, panel boards, and busway enclosures for local high current power distribution, transmission, or switching substations. They are also used to connect high voltage equipment at electrical switchyards, and low-voltage equipment in battery banks. Busbars can have a cross-sectional area of as little as 10 square millimetres (0. • - Data transfer channel connecting parts of a computer • - Low resistance electrical conductor for high current transmission and distribution • - Modular approach t.
