

Function of the heat tracing cable terminal box

Overview

The distribution box, as the "control core" of the electric heating cable system, enables zoned temperature control and data recording, providing early warning of freezing and blockage risks, and ensuring stable heating of long-distance pipelines. Think of it as the central nervous system that directs electrical current where it needs to go. Terminator DP is designed to fabricate power connections, in-line/T-splice connections or for making end terminations. Electrical connections are made in terminal blocks utilizing nickel-plated copper terminals to ensure corrosion-free electrical integrity. The kits are available for safe and hazardous areas and contain all the parts required for.
