

# **Function of the main switch in the distribution box**

## Overview

---

**Main Switch:** This is the "master control" for the entire distribution box, allowing the entire system to be turned off or on. In an emergency, flipping this switch cuts power to all circuits immediately, ensuring that maintenance and troubleshooting can be done safely.

**Function of Circuit Breakers:** When a circuit draws too much current or encounters a fault, the circuit breaker "trips" and cuts off the flow of electricity. This trip mechanism prevents potential hazards like fires or electrical damage to connected devices.

A distribution board (also known as panelboard, circuit breaker panel, breaker panel, circuit breaker, electric panel, fuse box or DB box) is a component of an electricity supply system that divides an electrical power feed into subsidiary circuits while providing a protective fuse or circuit.
