

High and Low Temperature Chamber for Optical Modules

Overview

A Co-Packaged Optics thermal cycle test chamber is a programmable environmental testing system designed to repeatedly expose CPO assemblies to controlled high and low temperature cycles. This architecture dramatically shortens electrical signal paths, improves bandwidth density, lowers power consumption, and enhances signal integrity. Designed for accelerated reliability testing in R&D and quality inspection and covering a wide range of test volumes and performance demands, the LIB industry temperature chamber precisely simulates extreme thermal environments to identify product risks before market launch. In order to facilitate the production line workers easier to carry out product testing, Wewon Environmental Chambers Co. Equipment Model: SenseFuture TEC High-Low Temperature Test Chamber + WTC115L Water-Cooled Temperature Controller Industry Sectors: Optical Communication / Data Center / 5G Front-Haul / Automotive Optical Interconnection Test Objects: SFP, SFP+, QSFP28, QSFP-DD, CFP Series Optical Modules and. By precisely simulating environmental conditions such as high temperatures, low temperatures, and temperature cycling, they evaluate the performance, durability, and adaptability of electronic.
