

Home router fiber optic cable is too far away

Overview

A: This may be possible, but would involve additional work (rerouting fibre, new cable runs) and therefore come at an extra cost. Q: What if the room I choose chose is too far away?

A: Our engineers will discuss alternatives with you on the day of your appointment. No question is too small, but please be sure to read the rules before asking for help. Attenuation is the weakening of light as it comes in from the transmitting end of the fiber and out of the transmitting end.

Solution: If your router is too far from the devices you use, and the WiFi connection is weak or drops frequently, you can opt to wire your device (if it accepts an Ethernet cable and is less than 100 meters away) — or if you really need WiFi, give these troubleshooting steps a try: 8 Simple Steps.

Understanding the distance fiber optic cable can travel is crucial for making informed infrastructure decisions that will serve your business for decades. recently got new fibre optic put in to my house replacing our old router, its got great speed but unfortunately its had to be installed at the front of the house further away from my pc than the old router was, resulting in slower speeds than i had before on my pc.
