

Hospital-grade OLT optical line terminal SFP selection guide

Overview

This guide provides a structured approach to evaluating SC APC SFP modules from a procurement perspective. It covers key specifications, compatibility considerations, common deployment challenges, and practical selection criteria to help ensure reliable and optical network. At the heart of a point-to-multi-point or passive optical network (PON) is the optical line terminal (OLT). The solution becomes a part of the access router by plugging the Cisco PON SFP+ into 10G ports of NCS540, NCS5500, and NCS5700 series routers. When selecting an SFP OLT (Small Form-factor Pluggable Optical Line Terminal), prioritize compatibility with your existing GPON or EPON infrastructure, ensure support for required wavelengths like 1490nm downstream and 1310nm upstream, and verify port density based on subscriber count 1.
