

# Hot aisle size parameters for local area networks

## Overview

---

**Maximum Aisle Length:** When equipment cabinets form a continuous row, the aisle length should not exceed 16 meters. Efficient airflow management in data centers relies heavily on proper Hot Aisle and Cold Aisle configurations. This guide provides an overview of best practices for energy-efficient data center design which spans the categories of information technology (IT) systems and their environmental conditions, data center air management, cooling and electrical systems, and heat recovery. Hot aisle containment consists of a physical barrier that guides hot exhaust airflow back to the AC return. System to include demountable ceiling supported wall panels above the equipment racks and floor supported door assembly at each end of the contained requirements: Glazing to meet or exceed ASTM seal the gap between the panels and the cabinets.
