

How much copper is in one meter of fiber optic cable

Overview

This guides optical signals via total internal reflection without conductive elements. Eliminating copper delivers significant performance advantages: Pure fiber optic data transmission cables contain no metallic copper. Fiber optic cables transmit data using light waves, enabling higher speeds and cover long distance. While in reality that figure is more realistic and viable for existing network equipment, it's still possible to get. Installation tools and connectors (RJ45) are also less expensive and widely understood by technicians.
