

How to Secure Invisible Optical Cables

Overview

Hot Melt Adhesive: Used to secure optical fibers and other components, ensuring a solid connection and reducing the risk of movement and damage.

Transparent Corner Protector: protects optical fiber from damage at corners and avoids signal loss due to fiber bending. invisible fiber optic cabling is an installation that hides fiber optic wiring inside a building or structure, often used to improve aesthetics and protect the fiber from external damage.

Invisible cable technology represents a groundbreaking advancement in the realm of fiber optics. Typical residential fiber installations involve routing fiber cable from an exterior wall-mounted network interface device (NID) to an interior wall outlet box (wall jack) inside the home or apartment. Invisible optical cable is a specially designed system of virtually invisible fibres, blend into its surroundings, making it less noticeable, dedicated for Multi Dwelling Unit and Living Unit applications.
