

# **How to adjust the fiberglass glow-in-the-dark float**

## Overview

---

Follow the three-step method adjust with weight, pull float down, trim until float shows correct marks. Glow-in-the-dark filament is a great way to add a unique, functional effect to your 3D prints, perfect for everything from fun toys to practical items like light switch covers. Night Fishing Bobber Modifications (quick, Cheap, Easy): I love night fishing, always have since I was a little kid. Tonight, we are talking about the ultimate nocturnal game changer: glow jigs and how they make every float pop and every subtle bite visible, turning a frustrating guessing game into a front-row seat to the underwater ballet. In this project we made a "2001 - A Space Odyssey" themed surfboard for night surfing. The board lights up using electroluminescent (EL) panel and wire and glow-in-the-dark resin. The surfboard blank was shaped from EPS by a fellow surfer who already made a few surfboards for himself.
