

# **How to connect a single-mode dual-port fiber optic transceiver**

## Overview

---

Insert a compatible SFP transceiver into the converter's port, making sure it matches the network's media type and speed. Then, connect one end of the fiber cable to the transceiver and the other to the appropriate port on a switch, router, or another media converter. Start by confirming the correct fiber type—single-mode or multimode—since mixing them will lead to transmission errors. Whether you are a network engineer, IT decision-maker, or simply exploring fiber optic technologies, this article will help you clearly.
