

# **How to connect an ultra-short fiber optic patch cord pigtail**

## Overview

---

A pigtail is a short fiber with a factory-polished connector on one end and bare fiber on the other. When you build or upgrade a fiber network, the same four words pop up everywhere— fiber optic (bare fiber), pigtail, patch cord, optical cable. This is exactly why most professional installers have moved away from field-termination and toward splicing. Patch cords support network applications in main, horizontal and equipment distribution areas and are available in riser (OFNR), and low smoke zero halogen (LSZH) rated jacket materials 5dB max.

## Comprehensive Fiber Optic Pigtail Wiki and Guidance

---

There is some loss and attenuation while building an optic fiber system. Correct fiber optic pigtail splicing will bring lower loss and attenuation to the optical fiber

### Patch cable

---

A patch cable, patch cord or patch lead is an electrical or fiber-optic cable used to connect ("patch in") one electronic or optical device to another for signal routing.

### What Is Fiber Optic Pigtail and How to Splice It?

---

It can be attached to optical fibers by fusion or mechanical splicing. Given the access to

a fusion splicer, you can splice the pigtail right onto the cable
