

How to set up a surveillance fiber optic cable

Overview

All you need here is a fiber optic cable and connector along with digital converter. Here are the steps to follow: Before installing any cables, you need to plan the layout of your security system. IP cameras that are part of a modern surveillance system are deployed using PoE technology that involves the use of copper based network cabling like CAT5e or CAT6 that has a data transmission limit of 100m (328ft). Since each building currently has its own NVR, the user plans to: Place a PoE switch (Power over Ethernet) in each building. Generally speaking, there are three methods for the connection of an IP camera, namely, copper wire, wireless and fiber optic cable.
