

How to wire the speaker head of the distribution box

Overview

Wire a Cat 5e/Cat 6 cable from each output port of the Audio Distribution Module to a Volume Control Module (165 feet max). Terminate each end of the Cat 5e/Cat 6 with an RJ 45 connector (CC-CT0500), following the T568A pin configuration. Wiring speakers to a distribution box in a car audio system can seem daunting, but with the right tools and knowledge, it can be a straightforward process. The first step is to ensure you have the correct wire gauge - too thin a wire can cause resistance and reduce audio quality. In this post, you'll find clear and detailed speaker wiring diagrams to help (and that you can print out if you like, too!). proper design and planning of the cabinets is essential to ensuring optimal sound and avoiding potential wiring or phase issues. Everything in a speaker can affect the sound of your system, from the type of conductor material to its thickness (or gauge), and from the insulator material covering the conductor to the arrangement of the conductors within that cover, from solid single-strand designs to bundles twisted together.
