

Huawei Q1 Parent-Child Router Fiber Optic

Overview

As a mainstream intelligent router product, Huawei routing Q1 innovatively adopts the concept of parent-child routing. Through the plug-in and play parent-child computer interconnection of the sub routers, it can improve the coverage area and is more suitable for large. The daughter-to-child routing is a parent route and a child route, in which the parent route has a built-in high-performance antenna + independent signal amplifier and is responsible for Wi-Fi coverage in most areas; and the sub-routing is plug-and-play and can automatically learn the parent. An optical fiber is a carrier of optical signals and transmits optical signals over a short distance. Don't worry, Huawei route Q1 is used with multiple self routes, so it's no longer a dream for WiFi signals to cover every room. If you want to classify, the router camp can be divided into Q1 and other routers.

Huawei Q1 Parent-Child Router Fiber Optic

Huawei FTTR for Home , FTTR-B Solution , Fiber to the

This solution uses fibers that feature small size, light weight, ultra-long service life, anti-EMI, and unlimited bandwidth evolution. It solves the last-meter coverage

Huawei Lingxiao router Q6 can easily solve the problem
