

In relay protection safety automation

Overview

Safety relay systems form the backbone of machine safety in industrial automation. These devices are designed to detect faults and initiate control measures to prevent possible harm. After a machine risk assessment is completed, and a Performance Level (PL) rating is defined according to ISO 13849-1, the next critical step is selecting and configuring the right safety relay. Which safety solution offers the most cost-effective, flexible, and compliant fit for my application?
