

Kazakhstan s 40G quantum communication optical active device

Kazakhstan s 40G quantum communication optical active device

Quantum Communication 101

Central to the SCaN mission is the distribution of quantum entanglement, which will enable quantum repeaters for long-distance quantum communication and the applications that can be built from it.

Quantum information processing with space-division

Here, we review recent results in quantum information based on space-division multiplexing optical fibres, and discuss new possibilities based on

(PDF) Single-chip 40Gb/s widely-tunable transceivers

We present a photonic integrated circuit (PIC) transceiver for frequency modulated continuous wave (FMCW) LiDAR applications.

Quantum Technology Monitor 2025 , McKinsey

Explore the latest advancements in quantum computing, sensing, and communication with our comprehensive Quantum Technology Monitor 2025.

Kazakhstan Integrated Quantum Optical Circuits Market (2024-2030)

Historical Data and Forecast of Kazakhstan Integrated Quantum Optical Circuits Market Revenues & Volume By Optical Fiber Communication for the Period 2020- 2030

Commercial and Military Applications and Timelines for Quantum

Quantum technology is grouped into three broad categories: quantum sensing, quantum communication, and quantum computing. Quantum sensing has a broad variety of potential applications, such as

Optical Quantum Memory and its Applications in Quantum

It is emerging as an essential device to enhance security, speed, scalability, and performance of many quantum systems used in communications, computing, metrology, and more. In this paper, we will

Recent progress in quantum photonic chips for quantum

Here, we provide an overview of the advances in quantum photonic chips for quantum communication, beginning with a summary of the prevalent photonic integrated fabrication platforms and key

Large-scale quantum communication networks with integrated

Here we present a proof-of-principle laboratory demonstration of a user-massively scalable and long-haul TF-QKD network enabled by integrated photonics, named the 'Weiming

All-optical superconducting qubit readout

Microwaves are usually used to interact with superconducting qubits, but optical photons

can be processed at room temperature. The electro-optical transceiver presented here allows all

Proposal for space-borne quantum memories for global quantum

Global-scale quantum communication links will form the backbone of the quantum internet. However, exponential loss in optical fibres precludes any realistic application beyond few hundred kilometres.

Optical Quantum Memory and its Applications in Quantum Communication

Optical quantum memory is a device that can store the quantum state of photons and retrieve it on demand and with high fidelity. It is emerging as an essential device to enhance security, speed,

Quantum communication across a 250-kilometre optical

A long-distance, real-world quantum cryptography link has been demonstrated over a fibre-optic telecommunications network in Germany.

43-GHz real-time optical quantum signal detection for

However, not every high-speed optical communication device can be used as is for optical quantum computers. For example, it is not possible to use

Realization of quantum secure direct communication over 100 km fiber

Thus, the experiment shows that intercity quantum secure direct communication through fiber is feasible with present-day technology.

Gigahertz measurement-device-independent quantum key

Measurement-device-independent quantum key distribution (MDI-QKD) is a technique for quantum-secured communication that eliminates all detector side-channels, although is currently

Long-distance coherent quantum communications in

Our results demonstrate repeater-like quantum communication in an operational network setting, doubling the distance for practical real-world QKD

Large-scale quantum communication networks with integrated

Combining mass-manufacturability, cost-effectiveness and high scalability of integrated photonics with long-distance quantum communication represents a viable path to large-scale

Optical and Quantum Communications

The central theme of our programs has been to advance the understanding of optical and quantum communication, radar, and sensing systems. Broadly speaking, this has entailed: (1) developing

Quantum for 6G communication: A perspective

Quantum communication systems use quantum interconnects to transfer entanglement between quantum devices. In particular, they offer

Quantum Network for Secure Communication

With the new fiber optic test facility at the Karlsruhe Institute of Technology (KIT), which opened on January 22, 2025, researchers aim to transmit, test and refine quantum keys. They also

Large scale quantum key distribution: challenges and solutions

The intensity and fidelity of the quantum signal exponentially. Unlike the classical optical communication, the unknown quantum signal cannot be perfectly clone (no-cloning theorem) or amplified without

Recent progress in quantum photonic chips for quantum

Here, we provide an overview of the advances in quantum photonic chips for quantum communication, beginning with a summary of the prevalent photonic integrated fabrication platforms

Long-distance coherent quantum communications in

A twin-field quantum key distribution protocol based on optical coherence is deployed over a 254-kilometre commercial telecom network,

Recent progress in quantum photonic chips for quantum communication

In this review, we focus on the latest advances in implementing quantum communication on quantum photonic chips. We begin by discussing state-of-the-art integration platforms used for quantum

Quantum communication in Russia: status and perspective

Quantum communication in Russia: status and perspective Vladimir I. Egorov, PhD Assistant professor, ITMO University, Department of Photonics and Optical Information Technologies

A review of quantum communication and information networks with

Quantum memory enables storage and retrieval of quantum information, while quantum entanglement generators generate entangled photon pairs. Artificial intelligence and machine

Recent progress in quantum photonic chips for quantum communication

Recent years have witnessed significant progress in quantum communication and quantum internet with the emerging quantum photonic chips, whose characteristics of scalability, stability, and low

Results of the First Observations with a New Optical Complex

Abstract?The description of an optical complex at the Assy-Turgen Observatory (Kazakhstan) is given. This complex is suited for astrometric and photometric observations of active and passive objects
