Latency Comparison of IK10 Busbar for IoT Applications

Performance evaluation framework of MQTT client libraries for IoT

This paper presents a performance evaluation framework for MQTT client libraries for IoT applications in the manufacturing industry. This paper aims to create a standardized virtual testing

A Comparative Analysis on IoT Communication

A comparative study is performed for each group of protocols in order to provide insights and a reference study for IoT applications, considering their

It's Not Just Coverage: Latency's Role in IoT Performance

Latency is the delay between when data is sent from a device and when a response is received. It might only take milliseconds, but in connected

[2310.09177v1] A Comparative Analysis on IoT Communication

Based on their respective strengths and weaknesses, the study also presents an application perspective of the suitability of each protocol in a certain type of scenario and addresses

Developing and Comparing Protocols for Low-Latency IoT Networking

This paper presents the design and performance comparison study of MQTT and CoAP

protocols of IoT that ensures low latency. The main motivation is to illustrate.

Low-latency communication protocols for industrial IoT

Each protocol is analyzed in terms of its architecture, performance characteristics, and suitability for industrial applications such as smart manufacturing, predictive maintenance, and industrial automation.

Latency Issues in Internet of Things: A Review of

We compared and reviewed all latency related literature and solution of the IoT, categorizing all 32 research papers and related commercial results in two different comparison tables.

A survey on communication protocols and performance evaluations for

This paper presents a straightforward overview of the lightweight communication protocols, technological advancements in application layer for the IoT ecosystem. The survey then

Comparing the latency of various wireless standards
