Multimeter for testing optocoupler sensors

Overview

The multimeter is a common tool for testing electronic components, and phototransistor optocouplers are no exception. This knowledge allows for quick and efficient troubleshooting, ensuring the proper functionality of circuits and preventing potential damage to sensitive components.

Optocoupler is one type of ICs, It isolates input and output section by using optical technology this feature increase safety of circuit. An opto-isolator contains a source (emitter) of light, almost always a near infrared light-emitting diode (LED), that converts electrical input signal into light, a closed optical channel (also called dielectrical channel, and a photo sensor, which detects incoming light and either generates.
