

# Network rack ventilation vents

## Overview

---

Hot air rises and escapes through top vents, while cooler air enters from the bottom. Ventilation slots: Strategic cutouts in cabinet sides, top, and bottom create natural airflow paths. Optimize temperature control and airflow in your server rack setup with exhaust solutions from Server Racks Online. The SRSWITCHDUCT is a rackmount, ducting kit that pulls air in from the front of the rack and directs it to the side intake on equipment such as network switches. Passive network cabinet ventilation is easy to explain: Racks with ventilation slots or even perforated elements can already use enough room air to sufficiently cool the server and hardware components.
