

# **North Macedonia EPON Equipment SFP**

## Overview

---

25Gbps upstream data rate, reaching a link up to 20km via an SC/UPC connector. Digital diagnostic monitoring (DDM) allows access to real-time operating parameters. It can be used with HA7200 series ONU and passive optical distribution network (ODN) to form a passive optical network to achieve performance management, fault management, and configuration management of the equipment. Our GPON and EPON equipment is consisted of OLT (Optical Line Terminal) and ONT (Optical Network Terminal). FS Product Custom is a customized service provided by FS to meet customers' hardware and software development needs, including product compatibility and software feature development for PicOS®, AmpCon, and transceivers. • BD-1234-SPM is an MSA-compliant SFP that incorporates not just the optics for an ONU, but all of the electronics need as well.
