

OCS High-Speed Optical Switch

Overview

OCS Optical Circuit Switch introduces an all-optical switching approach that eliminates unnecessary optical-electrical-optical conversions. As a result, data flows directly through the optical layer with lower latency, reduced energy usage, and higher determinism. Lumentum's optical circuit switches (OCS) enable the next generation of AI and cloud network architectures by replacing traditional electrical fabrics with flexible, energy-efficient. Meanwhile, bandwidth demand keeps expanding, and energy efficiency becomes a strict constraint. The OCS is insensitive to operating wavelength (supports O/S/C/LBand), transparent to optical transmission data speed and protocol independent.
