What Are Switch Stacking, Switch Trunking, Switch Uplink? What Is Switch Stacking? Switch stacking is to combine multiple stackable switches via a dedicated stacking port and stack

switch

For hosts connected to one VLAN to communicate with hosts in any other VLAN requires

a router. For example, assume the two switches each have 24 ports, and VLAN 10 has the

External IP Addresses, Subnet Masks, and SSH

I know the external IP of the master node in the beowulf cluster, and it's the only one connected to the Internet out of all the nodes. However, when I get the external IP to my desktop on

How routers deal with only one external IP?

I recently discovered that all my devices connected to a WiFi router have the same external IP. Call it 20.20.20.20. The thing that I don't understand is how the router figures out which

Does IP address matter when 2 hosts communicate through a switch

PC1 and PC2 are connected to switch 1 and switch1 is connected to router1. If the IP address on PC1 is misconfigured, it wouldn't be able to communicate with hosts on another network,

Is it possible to match an internal IP address to a switch port?

As others have mentioned, there is no direct way to determine what IP is connected to a certain switch port. The reason is that an Ethernet switch works at L2 of the OSI Model, and typically does not

How to Set Up Two ISPs With 1 Switch

Configure the DHCP server of LAN to hand out the IP addresses in a range that doesn't include the routers. For instance, configure to hand out IP

How do devices connected to a switch get their IPs?

One of the things I'm not clear on and couldn't find a satisfying answer to, although I've done some digging around, is how devices that are connected to

2 different external IP address for same network

Using the first two methods will work with any kind of outbound or inbound TCP/IP connection, and therefore will change your external (public) IP for any website/application that uses
